

Camera Mouse Changes Lives

Camera Mouse has helped thousands of individuals communicate using their head movement alone.

Camera Mouse is a program that enables people with significant disabilities to communicate using limited head movement.

Camera Mouse essentially replaces the mouse so it can be used with all types of application programs and websites.

The program is very easy to learn. To use Camera Mouse all you need is a standard USB webcam and a Windows Vista or XP computer. The Camera Mouse program is available for free download at

www.cameramouse.org.

FREQUENTLY ASKED QUESTIONS

Q Who can benefit from Camera Mouse?

Camera Mouse is intended for people with physical disabilities, people who cannot move their hands to control a mouse or speak to a voice recognition program. To use Camera Mouse a person needs to be able to control the movement of his head.

Q Is this really free? How?

Camera Mouse is available for free download. Our mission is to produce significant research which benefits people and society. Over 4,000 copies per month are downloaded. We would like to help as many people as possible.

Partial support for our work came from the National Science Foundation and from continuing generous gifts from the Philanthropy Committee of Mitsubishi Electronic Research Labs (MERL), from the Mitsubishi Electric America Foundation, and from the Accenture Fund at Boston College. Boston College and Boston University are most generous in providing support.

Q How do I install and use this program? What types of user training are available?

Simply go to www.cameramouse.org to download the program. Installation and operation of the program are quite straight-forward, but a full user manual is included. If you would like on-site training, please contact Maureen Gates of the Boston College Campus School at 617-552-8214 or gatesma@bc.edu

**Camera Mouse is easy to learn,
easy to use, and absolutely
FREE!**

TESTIMONIALS:

"I am extremely grateful to you and your team for releasing Camera Mouse for free use. Together with a spare computer and web cam I had lying around, it's given a young man a way to start interacting with the world again."

-- United States Camera Mouse User

"a valuable resource, not just for education but also for communication, enabling children with severe special needs to communicate, in some cases for the first time, with others and with their peers."

--Minister for Education of Northern Ireland

"I have found your fantastic program ... I am nearing 50 and I have found out that I have a degenerative condition... What I am finding is that the program works very well; I am using my daughter's ASUS lap top with built in camera... I thank you and your team for your outstanding work in this area."

-- Australia Camera Mouse User

Camera Mouse is a free program that allows you to control the mouse pointer on a Windows computer just by moving your head.

The program was developed to help people with disabilities use the computer. The main audience for this program is people who do not have reliable control of a hand but who can move their head. People with Cerebral Palsy, Spinal Muscular Atrophy, ALS, Stroke, TBI, Multiple Sclerosis, various neurological disorders use this program to run all types of computer software, including education programs, communication programs, and web browsers.

All that is needed to use Camera Mouse is a Windows Vista or XP computer and a webcam. Camera Mouse is available for free download.
